LEKUCH ET AL.

Examiner

Tom V Sheng

Art Unit

2673

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-23 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-23 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 30 July 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☒ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5, 7, 9-15, 18-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Ruedisueli et al. (US Patent 5838819).

As to claim 1, Ruedisueli teaches a digitizer input system (figures 1-4; electronic notepad 10) for inputting written information from a user, said input device system comprising:

at least one sheet of a writing medium (sheet of paper 30) having a unique identifier located thereon (identifier 36 at the upper right corner; column 3, lines 40-46; column 4, lines 39-56);

an electronic pen for writing on said writing medium and emitting one or more signals for generating pen stroke information (figure 9; Ruedisueli teaches that pen device 114 can be electronically connected to notepad 10 by a signal-carrying cable for providing data signals to processor 12 through writing on the notepad surface 26; column 8, lines 50-64);

a detector (figure 1; handwriting capturing device 24 having operative surface 26) for detecting said unique identifier and said pen stroke information from said emitted

Art Unit: 2673

signal (column 3, lines 23-28; column 4, lines 5-17; column 8, line 65, - column 9, line 2); and

local storage (memory 16) for storing said detected pen stroke information, in association with the unique identifier of said writing medium (figures 4 and 5; column 4, lines 31-38; column 5, lines 16-32; column 6, lines 12-23).

As to claim 2, Ruedisueli teaches wherein said input system is coupled to a computing device (figure 1; processor 12; column 3, lines 1-4).

As to claim 3, Ruedisueli teaches wherein said unique identifier is at least one of an image or an alphanumeric string (column 4, lines 46-67).

As to claims 4 and 5, Ruedisueli teaches tracing over said unique identifier with a number, letter, or other characters (column 4, lines 39-56). Further, the identification is automatic such that the notepad 10 can even generate successive number or letter, based on the first written identifier in the upper right corner.

As to claims 7 and 9, Ruedisueli teaches a display for displaying said unique identifier (output device 20 of notepad 10 can be a display; figure 1; column 3, lines 29-33).

As to claim 10, Ruedisueli teaches access of stored stroke information associated with a unique identifier by repeating the identifier first (column 6, lines 4-11).

As to claim 11, Ruedisueli teaches a method of using an input device system, said method comprising the steps of:

indicating a unique identifier located on a writing medium (figure 2; writing a number or letter at the upper right corner of a paper) to said input system (electronic

Art Unit: 2673

notepad 10) using an electronic pen (figure 9; signal-carrying pen 114) for writing on said writing medium, the pen emits one or more signals (inherent) for generating pen stroke information therefrom;

detecting said unique identifier information (figure 1; handwriting capturing device 24 having operative surface 26);

detecting said pen stroke information that is derived from said emitted signal (figure 4; element 40); and

storing said detected pen stroke information in association with said detected unique identifier (figures 3 and 4; element 46; column 4, lines 15-17). See also analysis of claim 1.

Claims 12 and 13 are rejected per analyses of claims 7, 9 and 11.

Claim 14 is rejected per analyses of claims 4 and 11.

Claim 15 is rejected per analyses of claims 5 and 11.

As to claim 18, Ruedisueli teaches a storage medium having computer readable program instructions (figure 1; stored programs 18) embodied therein for inputting information from a user to an input system, said storage medium comprising:

program instructions that are responsive to an indication of a unique identifier (a number or letter written) located on a writing medium (upper right corner) provided to said input system by emissions from an electronic pen (pen 114), said program instructions further being responsive to a detection of said unique identifier information derived from said pen emissions and to detected pen stroke information derived from said pen emissions (element 40); and

Art Unit: 2673

program instructions for storing said stroke information in association with said detected unique identifier (figure 4, element 46; column 3, lines 35-47; figure 5; column 5, lines 13-32). See also analysis of claim 1.

Claims 19 and 20 are rejected per analyses of claims 7, 9 and 18.

Claim 21 is rejected per analyses of claims 5 and 18.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 6, 8, 16-17, and 22-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ruedisueli.

As to claim 6, Ruedisueli teaches using upper right corner as the region for unique identifier. Ruedisueli is silent, however, on that region being user specifiable. On the other hand, this is merely an option to provide more preferences, which does not make a patentively distinct feature. Therefore, it would have been obvious for one of ordinary skill in the art at the time the invention was made to enhance the identifier region to be selectable, in order to accommodate personal preference.

As to claim 8, Ruedisueli does not teach associating a time stamp with detected pen stroke information. On the other hand, Ruedisueli teaches that the identifier can also be generated by a timestamp using a timer (column 4, lines 65-67). The

Art Unit: 2673

generation of a timestamp type of unique identifier and the association of a timestamp to pen strokes (in probably a page or session) are just different ways of applying a time signature to a piece of information.

Claim 16 is rejected per analyses of claims 6 and 11.

Claim 17 is rejected per analyses of claims 8 and 11.

Claim 22 is rejected per analyses of claims 6 and 18.

Claim 23 is rejected per analyses of claims 8 and 18.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Matthews (US Patent 5631741) teaches a small LCD display that indicates a particular page being accessed.

Crutchfield (US Patent 5357061) teaches the use of magnetic wave emission and a conductive grid for detecting input on a digitizer tablet.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tom V Sheng whose telephone number is (703) 305-6708. The examiner can normally be reached on 8:30am - 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bipin Shalwala can be reached on (703) 305-4938. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9314 for regular communications and (703) 872-9314 for After Final communications.

Art Unit: 2673

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3900.
